Nothing defines a space with such grace and proportion as Centurion Ornamental Steel Fencing from Stephens Pipe & Steel. Centurion, available in more than 15 different styles, meets a variety of fencing needs from architectural and landscaping enhancement to security and safety. Unlike other steel fencing products, Centurion is built to last and backed with a 12-year warranty against cracking, chipping, peeling or blistering. Centurion Ornamental Fencing is fabricated in three distinct combinations of gauge and strength to meet the needs of residential, commercial and institutional installations.

Three Levels of Protection

Centurion is offered in three distinct gauges and weights to meet nearly any fencing requirement.

Centurion I - This outstanding value is the answer to homeowners, business owners and developers seeking security and good looks. Recommended for apartment developments, swimming pool enclosures, gardens, commercial projects and residences where industrial strength fencing is neither appropriate nor budgeted. Centurion I provides an ideal solution to security and aesthetic concerns. Centurion I lends the distinctive and graceful appearance of traditional ornamental iron fencing with the added benefit of long maintenance-free service. Ornamental posts, rails and pickets are constructed from welded high-strength tubular galvanized steel. After fabrication, these components are overcoated with proven, thermally-bonded DuraLast. Black is the standard although other colors are available on request.

Centurion II - Centurion II offers the next level in product thickness and weight, making it ideal for light industrial or commercial applications.

Centurion III - The heaviest gauge steel is offered in this superior configuration, suiting it to heavy industrial and high security applications where aesthetics are important.

Centurion I and II Boulevard Bracket Assembly System

1. 1/8" Locking Rod Through All Pickets
2. Prepunched Hole for Locking Rod
3. Flexible Grommet
4. Line Bracket (w/fastener)
5. Slotted Hole Bottom of Rail
6. Square Hole Top of Rail
7. Through Hole for Mounting to Post
8. End Bracket (w/fastener)

Centurion II & III Industrial Bracket

9. Rails - High-strength welded steel tubular construction is structurally superior to other designs. Coated with thermally-bonded DuraLast.  
10. Pickets - Galvanized welded steel tubing is coated with thermally-bonded DuraLast for long maintenance-free service. Available in stamped spear, flat-top and flush-to-rail.  
11. Post Cap - Zinc alloy cap seals out moisture and enhances fence appearance.  
12. Posts - High-strength steel tubular posts are galvanized and overcoated with thermally-bonded DuraLast.  
13. Tamper Resistant Fasteners - Require special tools for removal.  
14. Grommets - Poly-vinyl grommets are installed to hold pickets firmly in place and seal out moisture.  
15. Dual Locking Rods - Zinc-plated steel locking rods slide into rails firmly, locking pickets in position. Eliminates unsightly screws and rivets. Assures that top and bottom rails share the load equally.

Thermally-Bonded DuraLast™ Finish Ensures Against Corrosion

Each Centurion component is formed from high-quality carbon steel, which is subjected to hot-dipped galvanized coating for corrosion resistance. A layer of phosphate prepares the galvanized steel for the DuraLast finish, applied electrostatically and thermally bonded after fabrication, ensuring that all welds and joints are fully protected. The result is a fence that requires no maintenance and carries a 12-year warranty.
